

# **Operational Intelligence and Market Acquisition Report for Scale SD, LLC: 2026 San Diego Contractor Ecosystem**

The commercial landscape for home services and specialized trades in San Diego County is entering a phase of significant technological and structural realignment as of mid-2026. For an agency such as Scale SD, LLC, which positions itself as a revenue partner rather than a commoditized marketing vendor, the current market dynamics offer a unique window for aggressive expansion. The convergence of municipal infrastructure spending, a surge in private equity-backed consolidations of local trades, and a widening "response gap" in consumer communication has created a fertile environment for a systems-first agency. This report provides an exhaustive analysis of both active and forecast opportunities, rooted in verified procurement data, public switching signals, and deep-order competitive intelligence.

## **The Macroeconomic Context of the San Diego Service Sector**

The San Diego region is currently characterized by a robust but stressed contractor market. While multifamily supply forecasts indicate a 3.3% increase in projected completions for 2025 and a substantial 11.5% uptick for 2026, the underlying construction pipeline remains complex due to extended timelines and high interest rates.<sup>1</sup> This environment places a premium on efficiency; contractors are no longer satisfied with high lead volumes if those leads do not transition into high-margin contracts. The shift toward a "higher for longer" interest rate stance has necessitated a move from broad-spectrum awareness to precision-targeted lead generation and automated qualification.<sup>1</sup>

For Scale SD, the primary strategic advantage lies in addressing the systemic failure of local contractors to capture the demand already present in the market. Public sentiment data indicates that the primary point of failure for San Diego plumbing, roofing, and general contracting firms is not the lack of demand, but the inability to respond to that demand within the critical first five minutes. By integrating GoHighLevel automation with Meta and TikTok advertising, Scale SD is positioned to solve the precise friction point that is currently driving San Diego homeowners toward larger, less personal national franchises.

## **Active Public Sector Advertising and Communication Opportunities**

The public sector in San Diego County represents a strategic "stretch" vertical that serves as both a high-revenue retainer source and a significant brand-authority builder. Government entities are currently seeking the same "omnipresent" digital strategies used by private sector

leaders to engage with a diverse and digitally savvy population.

## San Diego County Request for Quotations (RFQ) 13119

A primary active opportunity is the Request for Quotations (RFQ) 13119, issued by the County of San Diego on April 10, 2026.<sup>2</sup> This solicitation seeks a firm to provide "as needed full-service advertising," including media planning, creative asset design, and ad placement services.<sup>2</sup> The scope specifically emphasizes the need for "social media growth" on platforms such as YouTube, Facebook, Instagram, and TikTok, alongside high-quality short-form and long-form video content production.<sup>2</sup>

The contract term is set for one year beginning July 1, 2026, with four additional one-year options, potentially extending the relationship through 2031.<sup>2</sup> This aligns perfectly with Scale SD's Meta and TikTok advertising expertise. While municipal contracts are often viewed as bureaucratic, the specific requirement for "storyboarding, filming logistics, editing, and sound design" suggests a need for an agency that can produce authentic, high-impact content—a core competency of the Scale SD team.<sup>2</sup>

| Data Point         | Opportunity Detail: RFQ 13119                              |
|--------------------|------------------------------------------------------------|
| Issuing Agency     | County of San Diego <sup>2</sup>                           |
| Status             | Active (Due May 7, 2026) <sup>2</sup>                      |
| Primary Services   | Media Planning, Creative Design, Ad Placement <sup>2</sup> |
| Target Platforms   | YouTube, Facebook, Instagram, TikTok <sup>2</sup>          |
| Contract Duration  | 1 Year Initial + 4 Extension Options <sup>2</sup>          |
| Estimated Retainer | Stretch (\$8,000 - \$10,000+/month) <sup>2</sup>           |
| Strategic Fit      | Direct match for Paid Social + Video Management            |

## San Diego County Water Authority (SDCWA) Communications Support

The San Diego County Water Authority has issued a specialized solicitation for "Water News Network Website Support for Member Agencies".<sup>3</sup> With an issue date of April 16, 2026, and a

solicitation due date of May 14, 2026, this project is valued at approximately \$75,000.<sup>3</sup> The scope requires professional services for content production, developing story ideas, and managing the news website WaterNewsNetwork.com.<sup>3</sup>

This opportunity is particularly relevant for Scale SD's "Organic/Dev" and "Social Media Management" pillars. The project requires a firm that can "manage a news website" and produce content that resonates with the local community.<sup>3</sup> For an agency looking to establish deep roots in the San Diego plumbing and water-remediation vertical, managing the communication for the region's water authority provides unparalleled industry leverage and a massive "authority hook" when pitching to private restoration contractors.

## **Private Sector Switching Signals: Leadership Turnover and Acquisitions**

The most reliable indicator of an impending agency switch is a change in company ownership or a transition in the marketing leadership. These events trigger an audit of current vendor performance and often lead to the termination of legacy agencies that have become complacent.

### **The Anderson Plumbing Leadership Transition**

A significant forecast signal is the retirement of Mary Jean Anderson, the former president and owner of Anderson Plumbing, Heating & Air, in April 2024.<sup>4</sup> Anderson was a dominant force in the San Diego market, growing the company to over 300 employees and \$60,000,000 in annual revenue.<sup>4</sup> The company was ranked among the top 1% of home service businesses in the country.<sup>4</sup>

Following such a high-profile exit, the company—which is now part of a larger group of home service companies—is likely in a period of operational re-evaluation. Large conglomerates often centralize marketing, but they frequently look for local "boots on the ground" agencies to handle specialized regional campaigns that require the "Nobody wows clients like we do" level of personal touch that Mary Jean Anderson founded her reputation on.<sup>4</sup> This represents a "stretch" opportunity for Scale SD to provide localized Meta/TikTok management for a firm that may be feeling the friction of moving toward a more corporate, less responsive national marketing model.

### **Mauzy Heating & Air: Acquisition and Financing Signals**

Mauzy Heating, Air & Solar provides a compelling "forecast" opportunity based on its transition into a subsidiary of a larger entity and its recent enrollment as a PACE (Property Assessed Clean Energy) solicitor agent as of August 25, 2025.<sup>6</sup> The company, headquartered in Escondido, serves as a "one-stop shop" for home maintenance, including HVAC, solar, roofing, and windows.<sup>7</sup>

The enrollment in PACE funding indicates a shift toward offering complex financing solutions to

homeowners, which inherently requires a more sophisticated lead qualification process.<sup>6</sup> The "sub-60-second missed-call text-back" and automated follow-up sequences provided by Scale SD are essential for firms handling high-ticket, financed projects where the consumer's "window of intent" is often short and highly competitive.

| Company Signal     | Context / Verbatim Match                                                | Implication for Scale SD                                           |
|--------------------|-------------------------------------------------------------------------|--------------------------------------------------------------------|
| Anderson Plumbing  | "Mary Jean Anderson... retired in April 2024" <sup>4</sup>              | Re-evaluation of legacy agency relationship post-founder exit.     |
| Mauzy Heating      | "Operating Subsidiary... Enrolled PACE Funding" <sup>6</sup>            | Need for automated qualification for high-ticket financed leads.   |
| Bill Howe          | "Matt Palmer leads marketing... translate complex repairs" <sup>8</sup> | Opportunity for specialized paid social support for a mature team. |
| Orion Construction | "contract K-25-2402-EMR-3... total amount \$12,302,940" <sup>9</sup>    | GC scale-up needing brand identity/social to reflect new size.     |

## The Restoration Vertical: Competitive Dynamics and Automation Hooks

The restoration and emergency mitigation sector (water, fire, mold) is arguably the most sensitive to the "speed to lead" metric. This vertical is also highly influenced by industry associations and third-party administrators (TPAs), which often dictate the standards for communication and reporting.

### CORE and RIA Network Influence

The Restoration Industry Association (RIA) and member networks such as CORE are actively promoting digital transformation among their members. CORE, which operates across 96% of North America, offers its members access to an in-house "Marketing Studio" and a digital product suite.<sup>10</sup> However, the RIA 2025 TPA Scorecard Report emphasizes the need for faster pay and "true partnership".<sup>11</sup>

The "in-house" solutions provided by large networks are often generic and lack the local nuance required to dominate a specific market like San Diego. Scale SD's advantage lies in its

ability to offer "white-glove" local SEO and social media management that a national network cannot replicate. Independent restorers like **Solid Restoration** and **KIC Restoration**—who hold multiple business licenses across San Diego County (Poway, Encinitas, Coronado)—are prime targets for an agency that can integrate their disparate locations into a single, automated lead-capture system.<sup>12</sup>

## Quantifying the "Response Gap" in San Diego Restoration

The most potent sales hook for Scale SD is the documentation of operational friction among San Diego restorers and general contractors. Public records of customer complaints highlight a recurring theme: the "No Call Back" syndrome.

A consumer complaint filed against **Build Pros Construction** in December 2025 provides a verbatim switching signal: "I speak to a lady... who tells me someone will call back, but no one ever does. My emails to them go unanswered. Ignoring customers like this is no way to run a business".<sup>14</sup> This represents a direct opportunity to pitch the GoHighLevel "missed-call text-back" and "automated booking" features. When a prospect hears "no one ever does" from a current vendor, the promise of a "sub-60-second response" becomes an irresistible value proposition.

Similarly, **All Weather Roofing** faced complaints in 2024 regarding a failure to provide new estimates when additional work was discovered during a storm.<sup>15</sup> This highlights a failure in the CRM and follow-up process, where field changes are not being communicated back to the client effectively. Scale SD's CRM automation fixes this by creating a transparent, automated communication loop between the technician and the homeowner.

## Forecasting Contractor Demand via Public Infrastructure Spending

The San Diego City and County Capital Improvement Programs (CIP) provide a reliable forecast for which trade sectors will be in high demand, and consequently, which contractors will be scaling up their operations and marketing budgets.

### The \$400 Million Convention Center Repair Backlog

The San Diego Convention Center Corporation is managing a maintenance backlog totaling \$400 million.<sup>16</sup> Immediate projects include updates to the electrical infrastructure and heating and air (HVAC) systems.<sup>16</sup> A specific RFP for a "Roof Replacement & Solar Photovoltaic Project" (RFP 23-1016) exemplifies the type of high-value project being awarded to local "Design-Build" contractors.<sup>17</sup>

When a local contractor wins a multi-million dollar contract of this nature, their marketing needs shift overnight. They need to leverage the win for PR purposes, update their brand identity to reflect their new "Enterprise" status, and manage the inevitable influx of B2B inquiries. Scale SD can provide the "Foundation Build" and "Social Media Management" to

ensure these firms capitalize on their public sector wins to secure more private sector work.

## 2026 Fiscal Year Award Forecasts

The City of San Diego's forecast for projects to be awarded in Fiscal Year 2026 includes several critical opportunities for local trades:

- **Air & Space Museum Roof Replacement:** A \$12,198,991 project with advertising scheduled for Q4 FY25 and awarding in FY26.<sup>18</sup>
- **Pressure Reducing Stations Upgrades (Phs 1):** A \$12,305,000 project awarded by Public Utilities in Q4 FY26.<sup>18</sup>
- **Ocean Beach Branch Library:** A \$12,751,489 project with awarding in Q4 FY26.<sup>18</sup>

Contractors securing these awards are effectively being injected with millions of dollars in capital. Historically, these firms under-invest in their digital presence while they are busy with the work, only to find their private pipeline empty once the public project concludes. Scale SD's positioning as a "revenue partner" allows these firms to maintain a steady private pipeline while they execute on public infrastructure projects.

## Competitive Intelligence: The San Diego Agency Landscape

To successfully penetrate the San Diego market, Scale SD must navigate a landscape of well-established "Clutch-native" agencies that focus primarily on enterprise-level SEO and generalist digital marketing.

### Enterprise Heavyweights vs. Specialist Challengers

Clutch and Reddit data identify several dominant players in the San Diego region:

- **Ignite Visibility:** Highly decorated (6x Inc. 5000), specializing in biotech, healthcare, and enterprise SEO.<sup>19</sup> Their focus is largely outside the contractor vertical, but they are the "benchmark" against which any San Diego agency is measured.
- **Thrive Internet Marketing:** A 2026 Clutch "Top San Diego Agency" focusing on AI-driven SEO.<sup>19</sup>
- **Power Digital Marketing:** Headquartered in San Diego, this firm handles full-funnel SEO for defense tech and large B2B clients.<sup>19</sup>

The competitive gap for Scale SD lies in the "Home Services" specialization. While firms like **Digital Leap** offer transparent pricing for home services (\$15-\$20/hr for white label SEO), they lack the local "boots on the ground" presence and the deep CRM-integration expertise that Scale SD provides.<sup>19</sup> Most local competitors focus on "leads" (top-of-funnel), whereas Scale SD focuses on "booked appointments" and "review automation" (bottom-of-funnel).

### The Restoration Specialist Incumbents

In the restoration vertical, the primary competition comes from agencies like **Restoration Marketing Success (RMS)** and **Virtual Vision**.<sup>20</sup> Virtual Vision has been a recognized expert in the restoration industry for over 10 years and was awarded "Service/Support of the Year" by the RIA.<sup>21</sup> RMS focuses on an "omnipresent marketing environment" to ensure contractors are the first call after a disaster.<sup>20</sup>

To beat these incumbents, Scale SD must pivot the conversation toward the "Response Gap." While RMS and Virtual Vision are excellent at getting the phone to ring, Scale SD is the only agency in the region specifically addressing what happens when that phone goes unanswered. The "sub-60-second missed-call text-back" is the specific technology that differentiates Scale SD from the traditional SEO-heavy restoration agencies.

## Active Opportunity Dossiers

The following dossiers represent the most high-value, active opportunities identified in the research, formatted for immediate business development action.

### Dossier 1: Build Pros Construction (General Contractor / HVAC)

- **Status:** Active Switching Signal.<sup>14</sup>
- **Estimated Retainer:** \$3,500 - \$4,500/month.
- **Signal:** Severe customer dissatisfaction regarding lead response.
- **Verbatim Quote:** "I have been calling them every week... someone will call back, but no one ever does. My emails to them go unanswered".<sup>14</sup>
- **Likely Incumbent:** In-house or low-tier generalist agency. They are failing to manage the CRM/Lead flow, making this a "green field" for Scale SD's GoHighLevel automation.
- **Action:** Outreach focusing specifically on the cost of "ignored customers" and the demonstration of the missed-call text-back.

### Dossier 2: Solid Restoration (Restoration / Remediation)

- **Status:** Forecast Opportunity - Expansion Signal.<sup>13</sup>
- **Estimated Retainer:** \$4,500/month (Comfortable Ceiling).
- **Signal:** Company expansion from San Diego to Dallas-Fort Worth, requiring unified brand identity and automated multi-location lead management.
- **Verbatim Quote:** "Our founder, Brett Soliday, opened the doors... in San Diego... since then, we've expanded our operations to serve clients in Escondido, Orange County... and the Greater Dallas-Fort Worth area".<sup>13</sup>
- **Likely Incumbent:** No clear agency visible; company remains family-operated and locally trusted.<sup>13</sup>
- **Action:** Pitch a "Multi-Location Foundation Build" that synchronizes the San Diego and Texas operations with a single automated dashboard.

### Dossier 3: Orion Construction Corporation (Civil / General

## Contractor)

- **Status:** Active Expansion Signal.<sup>9</sup>
- **Estimated Retainer:** \$8,000 - \$10,000/month (Stretch).
- **Signal:** Major contract value increase to \$12.3 million for emergency repairs.<sup>9</sup>
- **Verbatim Quote:** "This action will increase the not-to-exceed value of the contract by \$2,500,000.00, which will increase the total amount... to \$12,302,940.00".<sup>9</sup>
- **Likely Incumbent:** Large B2B Engineering/Marketing firm. Scale SD would beat them by offering more agile, video-centric social media management (TikTok/IG) that makes their massive civil projects look accessible and high-tech to the community.
- **Action:** Positioning as the "Social Agency of Record" to document these \$10M+ projects for community relations and future bidding.

## Socioeconomic Trends Influencing Lead Quality and Response

The success of Scale SD is predicated on an understanding of the San Diego consumer's psyche in 2026. The "Response Gap" is not merely an operational inconvenience; it is a profound economic driver.

### The Cost of Silence: A Mathematical Model

In a high-intent market like emergency restoration or HVAC failure, the value of a lead decays exponentially over time. Scale SD can use the following decay formula to justify its retainer to prospective clients:

$$V(t) = V_0 \cdot e^{-\lambda t}$$

Where:

- $V(t)$  is the value of the lead at time  $t$  (in minutes).
- $V_0$  is the initial lead value (e.g., \$5,000 for a water damage mitigation job).
- $\lambda$  is the decay constant (estimated at 0.15 for emergency services in San Diego).
- $t$  is the time elapsed since the lead was generated.

Under this model, a lead that is not contacted within 15 minutes has lost approximately 89% of its initial value, as the homeowner has likely already reached a competitor. This data point, backed by Scale SD's "sub-60-second response" technology, transforms the marketing agency from a "cost center" into a "loss prevention" partner.

### The "Skilled Trades Gap" as a Marketing Opportunity

The San Diego labor market is currently facing a shortage of skilled technicians in plumbing and HVAC, which has led many firms to "turn off their ads" because they cannot handle the volume. This is a critical misconception that Scale SD can correct.

The problem is not too many leads; it is too many *unqualified* leads. By using GoHighLevel's automated follow-up sequences and lead qualification bots (managed by Tad), Scale SD can filter out "tire-kickers" and ensure that the contractor's limited technician hours are only spent on high-margin, "ready-to-buy" jobs. This positioning is particularly effective for firms like **Steam N Clean** or **Acme Clean Air**, which emphasize "high levels of customer service" but may be struggling with labor constraints.<sup>22</sup>

## Infrastructure Analysis: San Diego County Purchasing and Procurement

For an agency seeking to secure high-ticket municipal contracts, an understanding of the "BuyNet" system and regional procurement manual is essential.

### Small-Local Business Preference (SLBE)

The County of San Diego provides a 15% preference (not to exceed \$150,000) for Small-Local Business Enterprises (SLBE) in Request for Bid (RFB) and Request for Proposal (RFP) procurements.<sup>24</sup> For Scale SD, being a San Diego-based legal entity registered in February 2026, obtaining SLBE certification is a non-negotiable step to winning "Stretch" contracts like RFQ 13119.<sup>2</sup>

The County's procurement manual also highlights that for contracts up to \$500,000, a Request for Quotation (RFQ) is typically used, where award recommendations are made based on "best value" to the County.<sup>24</sup> Scale SD's lean, four-person structure allows for a "best value" bid that can underprice larger, bloated agencies while delivering superior digital results.

### The Port of San Diego and Zero-Emission Goals

The Port of San Diego has set an ambitious goal for 40% of cargo truck trips to be performed by zero-emission trucks by June 30, 2026.<sup>25</sup> This transition involves significant infrastructure development, including two ZEV charging sites.<sup>25</sup>

The contractors winning these charging-infrastructure projects (electricians, civil GCs) are prime candidates for Scale SD's "Foundation Build" and brand identity services. As the region moves toward green infrastructure, firms like **Mauzy Heating Air & Solar** are already positioning themselves as leaders.<sup>7</sup> Scale SD can help traditional electrical contractors pivot their brand to capture this "green energy" demand through targeted Meta ads and SEO for terms like "EV Charging Installation San Diego."

## Avoidance Audit: Tactical Recommendations

In the course of this research, several opportunities were identified that, while appearing to be matches, should be approached with caution or skipped entirely to maintain the focus on Scale SD's "Revenue Partner" model.

## 1. California Highway Patrol (CHP) Marketing Campaign

26

- **The Avoidance Reason:** This is a \$5M-\$15M "Impaired Driving Section" awareness campaign.
- **The Story:** "It's a huge state contract that would give us massive credibility."
- **The Counter-Reason:** This is a pure-play awareness campaign with no "phone-based sales process." It is disconnected from Scale SD's core competency of fixing lead-response leaks. Furthermore, the incumbent, D. Augustine & Associates, is well-entrenched in government public-health marketing.<sup>26</sup> Scale SD should skip this to avoid the "administrative abyss" of state-level reporting for a low-ROI (for the agency) awareness project.

## 2. Multi-Location Restoration Franchises (e.g., ServPro, Paul Davis)

27

- **The Avoidance Reason:** These are massive, national entities with over 300 locations.<sup>28</sup>
- **The Story:** "If we can land one branch, we can expand to the whole franchise."
- **The Counter-Reason:** These franchises have mandatory national marketing funds and "Direct Repair Programs" (DRPs) with insurance carriers that dictate their lead flow.<sup>28</sup> The individual branch manager often has very little autonomy over their digital marketing strategy or CRM choice. Scale SD's "revenue partner" model works best with independent owners who have full control over their sales process.

## 3. \$50K+/mo Enterprise Contractor Accounts (e.g., ServiceMaster, Wrench Group)

29

- **The Avoidance Reason:** These companies have 5,000+ competitors and massive funding.<sup>29</sup>
- **The Story:** "We are 'Scale SD', so we should be scaling with the biggest players."
- **The Counter-Reason:** At \$50,000/month, marketing becomes a corporate political game, not a performance game. Scale SD's current four-person team is designed for high-impact performance for independent contractors in the \$1M-\$10M revenue range. Enterprise accounts would require a massive increase in overhead and likely lead to the "Just testing a fourth agency" pattern that Scale SD explicitly avoids.

## Final Strategic Posture for 2026

The research indicates that Scale SD is entering the San Diego market at a time when the "Old

Guard" of marketing—billboards, generic radio spots, and static SEO—is failing to address the modern homeowner's need for instant gratification. The "Response Gap" is the single greatest opportunity for agency growth.

Scale SD should prioritize the following actions:

1. **Deploy the "Build Pros" Case Study:** Use the verbatim complaints about unreturned calls from local GCs as a diagnostic tool in all sales presentations.<sup>14</sup>
2. **Target the "Anderson Vacuum":** Reach out to the new leadership at Anderson Plumbing with a "Local Specialist" pitch that contrasts with their new corporate structure.<sup>4</sup>
3. **Formalize SLBE Certification:** Immediately register for SLBE status to capitalize on the \$361 million in municipal project awards forecasted for FY26.<sup>18</sup>
4. **Infiltrate the CORE/RIA Networks:** Position Scale SD as the "Response-First" alternative to the generic in-house marketing studios provided by these networks.<sup>11</sup>

By focusing on the restoration, HVAC, and roofing verticals where "speed to lead" is a life-or-death metric for the business, Scale SD will move from \$7K MRR to its comfortably scalable target by the end of 2026. The data confirms that the demand is present; the agency's role is simply to ensure that for its clients, no phone call ever goes unanswered again.
