

Unfiltered Thinking

IMPORTANT NOTE FOR READERS OF THIS DOCUMENT

This document is written in a structure that shows you the thinking behind the system we are developing by the end of Friday. First you will need to read the general thinking behind this system below, so you understand the value. Next, the next chapter is a concise conceptual summary of this first document that solidifies them into digestible concepts. The third document is sharpened further as simply the system. The last chapter is going to be roles and execution strategy. Take the time to review each one. This is how we should produce systems from now on so we can criticize and sharpen each other's thinking. This is a process I took from Amazon, and I think should be integrated into our daily work together as a team for clearer thinking and proper prioritization.

The main bottleneck in our current growth as a business is the amount of cold calls we do. It is also the amount of successful cold calls actually show up to the meetings we set for them. It is also the amount of those successful meetings that we convert into signed proposals. And from there the amount of proposals we receive payment on and begin work. Thinking from fundamental principles, if we had a *good, clear* and tested system to expedite and optimize this process, we would grow quickly. If we did not, we would grow slowly, if at all (the likelihood of negative growth is higher than you think and closer than you think if a system is not put in place as soon as possible).

The main bottleneck in cold calling is two things: Time and leads. We need more leads, we only have a limited amount of time to find said leads and call said leads. If we can only call contractors between 11-1, and maybe 3-4 (*unlikely* at most), we have a 2 hour period, 5 days a week (Tuesday through Saturday) to grow our business. This means preparation must be done as much as possible in the hours we cannot call. Productive preparation. This means we need to get a list of leads, ready to call, with a list of notes about said lead. We don't need to see their website or instagram, we need insights directly on the lead list. We need "needs help with website" "has instagram but doesn't post consistently" "had people doing content before". Any information that can help us sell and understand the lead is important. We also need someone going through said leads and finding signs that they may be interested in doing advertising, getting a website, building a social media presence,

etc... If someone has 3K on Instagram and a sexy website, we really don't need to speak to them. We need a LARGE list of qualified leads, ready to go, maybe pre-warmed as well.

The system for this is clear. Scrape the web. Scrape yelp. Scrape anything we can to find business owners.

Manually filter through them, look at the website, social media, google, yelp. If the lead already has *good* social media management and online presence, no need to put them on the LEAD list. Just make sure we have a way to make sure we don't call them again/analyze them over and over from multiple scraping sources. This will be Tad and Ashane's main job. Scraping THOUSANDS of leads, and sorting through them, gathering info, social media, pasting links in one place and writing down observations that will help with sales. They will be placed within a lead list. They will have a responsibility to supply a large number of leads per week so within those precious hours we can make 30-50 calls a day. So 150 QUALIFIED, HIGH QUALITY leads a week to start. These are leads who need our help, and have showed some kind of effort in the past to post on social media. 30 leads for 5 days. That means 15 leads called per hour, for 10 hours a week. We can start with that system alone. Booking appointments in an efficient way can wait until we have appointments to book. But we know in person works better than on the phone.

Organized Thoughts

Organized Thoughts

THE PROBLEM

The main bottleneck in our current growth is the amount of cold calls we do. We can only call contractors between 11 and 1. That is a 2 hour window, 5 days a week. 10 hours to grow the business. This means everything we do outside those hours must prepare us for those hours.

THE TWO CONSTRAINTS

Time and leads. We need more leads, and we only have a limited amount of time to find them and call them. Preparation must be done in the hours we cannot call. Productive preparation.

WHAT THAT PREPARATION LOOKS LIKE

A large list of qualified leads, ready to call, with notes already written, and social media, website, google business, yelp links. Insights directly on the lead list for us to read before calling. This brief should be everything we need to start the conversation. Things like: needs help with a website, has Instagram but doesn't post consistently, had people doing content before. Any information that helps us sell and understand the lead before we dial.

WHAT QUALIFIES A LEAD

Someone who has shown some effort toward building an online presence but isn't there yet. If someone has 3K on Instagram and a strong website, we don't need to speak to them. We need leads who need our services, and will find them valuable.

THE SYSTEM

Scrape Yelp, scrape the web, find business owners at scale. Any sources possible to scrape need to be scraped. Ashane and Tad manually filter through them. Check the website, social media, Google. If the lead already has strong online presence, they do not go on the lead list. The leads who make the list are the ones who need us and have shown at least some past effort to show up online.

THE NUMBER

150 qualified leads per week. 30 per day. That gives us 15 calls per hour across our calling window. That is where we start.

Finalized System

Finalized System

SCRAPING SOURCES

Google Maps and Yelp.

SHEET 1 — SCRAPED LEADS

Every lead pulled from a scraping source goes here unfiltered.

Columns: business name, phone number, point of online presence (URL), scrape source (Google Maps or Yelp), city/location.

MANUAL ANALYSIS

First pass: remove any lead missing a phone number or a point of online presence. Delete it from Sheet 1.

Second pass: open every point of online presence for the lead. Check the website — is it outdated, poorly designed, or missing entirely. Check Instagram and Facebook — are they posting inconsistently, do they have low engagement, low followers, or no account at all. Check their Google Business profile — is it incomplete, unverified, or missing reviews. Check their Yelp page — is it sparse, unmanaged, or missing.

If they have a strong website, strong Google and Yelp presence, good following and consistent engagement on Instagram and Facebook, and are clearly already running professional content or ads across all of those, mark the row red and leave it.

If any single one of those areas is weak, incomplete, or missing, they pass and move to Sheet 2.

SHEET 2 — QUALIFIED LEADS

Leads that have passed both qualifying passes get moved here.

Columns: business name, phone number, city/location, mandatory notes, website, Instagram, Facebook, Google Business, Yelp. Only one point of online presence is necessary to qualify, but if any are missing, note it.

Notes are mandatory for every lead and the quality of those notes directly impacts the quality of the call. Take the time to do it right.

Notes must include:

- What is weak or missing across their online presence
- What they have clearly attempted in the past — running ads, having a content person, posting consistently at some point
- Anything that stands out as a direct conversation starter or sales angle for the call

Tasks of Establishment

TASKS FOR ASHANE AND TAD (AS A TEAM)

- ☐ Build a scraper for Google Maps that outputs business name, phone number, and primary URL into Sheet 1.
- ☐ Build a scraper for Yelp that outputs the same fields into Sheet 1.
- ☐ Create Sheet 1 and Sheet 2 in a shared workspace accessible to everyone in the company.
- ☐ Define and lock in the column structure for both sheets exactly as outlined above.
- ☐ Schedule dedicated time blocks for manual analysis and lead qualification to produce a minimum of 150 new qualified leads per week in our target area. This is the primary responsibility and the main purpose of this system.

Additions and Further thinking

Additions

Website

- Bad styling and layout
- No clear explanation on what they do and why they are different
- Sales structure/not optimized for sales and calls to action
- No reviews or social proof
- No Portfolio online showing work

Instagram

- Posted in the last 90 days
- Inconsistent posting schedule
- Low quality content (no hooks/captions/sales strategy/copywriting/bad brand)
- Poor SEO strategy (Not including keyword in their descriptions)

Facebook

- Posted in the last 90 days
- Inconsistent posting schedule
- Low quality content (no hooks/captions/sales strategy/copywriting)
- Poor SEO strategy (Not including keyword in their descriptions)
- Posted on groups trying to get business (contractor groups, etc → Signals attempts to get business)

Google profile

- No basic information (phone number, address, website)
- Low review count
- No posts on google business profile
- Low quality photos
- Unclaimed account

Yelp

- Low reviews
- Bad images

- Bad/Low Information

Tiktok

- Has a tiktok
- Tried posting on tiktok in the last 90 days
